

VoDSL TELEPHONY SOLUTION

ABSTRACT OF THE DISCLOSURE

5 A Voice over DSL (VoDSL) solution allows an end user to buy and install off the shelf IAD (Integrated Access Device) devices for DSL (Digital Subscriber Loop) connection without the need for a technician. Each piece of equipment (telephone, facsimile, modem, computer) is provided with its own adapter which connects to the RJ11 wall connector without requiring rewiring the phone lines in the wall. The adapter enables the telephone equipment to be connected to the DSL link digitally and controlled by the IAD.
